It currently consists of 33 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  811: contig of 811 bp in length
831: gap of unknown length

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTE: This is a 'working draft' sequence. It currently consists of 53 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       contig of 811 bp in length gap of unknown length contig of 1045 bp in length gap of unknown length contig of 1045 bp in length contig of 1091 bp in length gap of unknown length gap of unknown length contig of 798 bp in length gap of unknown length contig of 1396 bp in length gap of unknown length gap of unknown length contig of 1036 bp in length gap of unknown length contig of 1036 bp in length gap of unknown length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     strand).

The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons using a specially developed Hidden Markow Model (Kroph et al., Nucleic Acids Research, 22(22):4766-4778(1994) and the FramePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at http://www.nih.go.jp/
jun/cgi-bin/frameplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon gitted for (att.) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the most upstream initiation codon.

If this cannot be identified we choose the most upstream initiation codon.

Information codon.

If may be shorter because we only sequence sequenced clone. It may be shorter because we only sequence small overlap between neighbouring submissions. Cosmid 664 lies between D31 and D63 in the Asel-D genomic restriction fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note-"SC664.01, adk, adenylate kinase, partial CDS, len: >94 aa; almost identical to KAD_STRCO adenylate kinase (EC 2.7.4.3) (205 aa) and highly similar to many e.g. KAD_BORPE adenylate kinase (EC 2.7.4.3)(218 aa), fasta scores; opt: 253 z-score: 429.1 E(): 1.2e-16, 50.6% identity in 85 aa overlap. ```

unknown length of 1148 bp in length

```
arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 26 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequencing vector: M15, 55
Sequencing vector: plasmid; 5%
Chemistry: Dye-primer ET; 76% of reads
Chemistry: Dye-terminator Big Dye; 24% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 19793 bases at least Q40
Consensus quality: 1979413 bases at least Q20
Consensus quality: 194956 bases at least Q20
Insert size: 221000; agarose-fp

* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in Which they appear is completely
* arbitrary Low-pass sequence sampling is useful for
* dentifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

                                                                                                                                                                                                                                                                         **Cottor, ush
Center project name: H_NH0753114.

**NOTE: This record contains 231 individual

**Sequencing reads that have not been assembled into

**contigs. Runs of N are used to separate the reads

**and the order in which they appear is completely

**arbitrary. Low-pass sequence sampling is useful for

**identifying clones that may be gene-rich and allows

**overlap relationships among clones to be deduced.

**However, it should not be assumed that this clone

** will be sequenced to completion. In the event that

** the record is updated, the accession number will

** be preserved.

**NOTE: This record contains 326 individual

**NOTE: This record contains 326 individual

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low-pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will

* be preserved.

Homo sapiens chromosome 18, clone RP11-484N16
                                                                                        * NOTE: This record contains 89 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will

NOTE: This record that have not been assembled into
sequenching reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
However, it should not be assumed that this clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Birren, B., Linton, L., Nusbaum, C. and Lander, E. ```

* sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be generich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will be preserved. unknown lengtn y of 793 bp in length unknown length of 770 bp in length unknown length 776 bp in length known length 766 bp in length known length length length length 772 bp in length known length 785 bp in length length length length length length length 786 bp in length length length length length length length length length of 788 bp in length unknown length of 782 bp in len unknown length of 781 bp in len unknown length 797 bp in len unknown length of 763 bp in len unknown length unknown length of 780 bp in ler unknown length unknown length of 797 bp in ler unknown length bp in ler n length length 770 bp in le known length 781 bp in le nown length 763 bp in le nown length of 772 bp in le unknown length length length length length length unknown length NOTE: This record contains 88 individual unknown lengtm of 773 bp in 1 unknown lengt of 772 bp in 769 bp in unknown lengt of 754 bp in 766 bp in 768 bp in 860 bp in 763 bp in of 779 bp in 760 bp in unknown leng of 784 bp in unknown unknown unknown unknown unknown unknown unknown unknown 768 ŏ 786: contig gap of contig gap of contig contig qap of contig gap of contig gap of contig ð contig contig contig contig contig gap of gap of contig contig gap of gap of gap of contig gap of contig gap of gap of qap of qap of gap 2334: 3880: 4652: 6188: 7738: 13934: 16330: 19405: 20202: 1549: 5422: 8506: 11607: 15470: 17865: 18645: 3104: :6969 9260: 10044: 10826: 12400: 13166: 14707: 17102: 20999: 21778: 22546: 23318: 24106: 1550 6189 6970 2335 3105 3881 4653 5423 7739 8507 10045 11608 13167 13935 14708 15471 17103 17866 18646 19406 20203 21000 21779 787 9261 10827 12401 16331 23319 22547

                        Consists of 6 contigs. The true order of the pieces consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9.1%; Score 41.2; DB 55; Length 75135;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
